Thread 8mm cord like this to attach Clampbots and /or Edgebots together. Attach as many as you need, and micro-adjust them by sliding them up or down the cord.

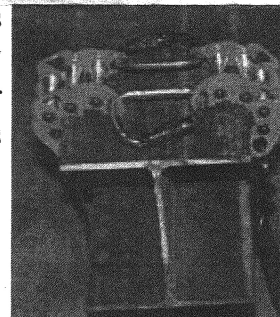

Use an Clampbot on railings. Shown here with Rail Roller strap (sold separately).

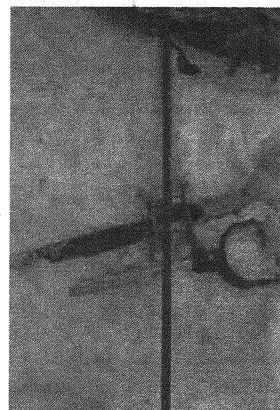

The articulating Clampbot can form to thin railings and even flanges

Edgebot crampons allow it to firmly grab onto beams or guardrails

ClampBots and Edgebots can be used almost anywhere. Here and EdgeBot is sitting on

Redirecting a rope around a post or tree is easy

You can redirect a slightly off angle rope like this with both clampBots and Edgebots.
